Description

Hi all,

When trying to run P3MediaServer in the subtle wm I'm presented with a blank window and nothing else. On other window managers PS3MediaServer works fine. Also, Jdownloader, another java-based app, works fine under subtle.

PS3MediaServer is available under Arch's AUR in both stable and svn releases. Both of these versions have the same issue under subtle.

Enabling the :wmname option fixes that for me, but it is dependent on the java version. (JRE here)

This is in fact not a bug of subtle and I refuse to add stuff subtle doesn't need and that isn't required by any spec.
