

subtle - Bug #267

Subtext::Sublet#data returning wrong value

11/14/2011 12:52 AM - Dominikh Honnef

Status:	Closed	Start date:	11/14/2011
Priority:	Urgent	Due date:	
Assignee:	Christoph Kappel	% Done:	0%
Category:	Bugfix	Estimated time:	0.00 hour
Target version:	Xi		
Description			
Subtext::Sublet#data seems to be returning the ID or some internal ordering of the sublets, instead of the data. Coincidentally, Subtext::Sublet#data= has no effect at all.			
Example:			
<pre>require 'subtle/subtext' p Subtext::Sublet.all.map { s '%s: %s' % [s, s.data]} Subtext::Sublet.all.each { s s.data = 'hi' } p Subtext::Sublet.all.map { s '%s: %s' % [s, s.data]} # >> ['status: 0', 'cpuchart: 1', 'clock: 2', 'temp: 3', 'mpd: 4'] # >> ['status: 0', 'cpuchart: 1', 'clock: 2', 'temp: 3', 'mpd: 4']</pre>

Sorry, the docs are just outdated here, I changed the behaviour of this method a while ago and apparently forgot to fix docs. I renamed #data= to #send_data in [r3122](#) to make it clear, the method sends data to a [sublet](#), when it has a :data event. The data is passed as second argument to the handler.

Example:

```
configure :sublet do
  # boiler plate
end

on :data do |s, data|
  s.data = data
end

Subtext::Sublet[:sublet].send_data("foobar")
```

The idea for the change was to be able to use multiple ways to update the [sublet](#).

The #data method never worked, xlib doesn't allow a two-way communication and in order to get this working I'd need to export the values of every [sublet](#) to a window property. I don't see any benefits for this, especially since [sublets](#) are updated quite often, therefore I removed #data.
