subtle - Bug #269

Licq consumes keys

11/14/2011 10:57 AM - Jens Kapitza

Status:	Not a bug		**Start date:**	11/14/2011
Priority:	Urgent		**Due date:**	
Assignee:	Christoph Kappel		**% Done:**	0%
Category:	Bugfix		**Estimated time:**	0.00 hour
Target version:				

Description
Apparently, licq consumes some keys and make some [grabs](#) like W-l unuseable.

History

#1 - 11/14/2011 11:13 AM - Jens Kapitza

window changeing in same view with Win-L (Super-L) does not work with Licq (seems that licq consumes the key)

#2 - 11/14/2011 01:24 PM - Christoph Kappel

- Subject changed from licq nimmt WIN-l to Licq consumes keys

- Category set to Bugfix

- Status changed from Unconfirmed to Not a bug

- Assignee set to Non member users

Generally clients can do this and there is no way for the wm do prevent that. Keypress events are propagated through the window hierarchy until a window with a correct input mask receives it. When the client receives the keypress it can decide to consume it and not to propagate it to an parent window.
