

subtle - Bug #301

Keyboard Layout issue

09/03/2012 03:08 PM - Dicksmash McLroncock

Status:	Not a bug	Start date:	09/03/2012
Priority:	Urgent	Due date:	
Assignee:	Christoph Kappel	% Done:	0%

Target version:			
Description When mapping W-y and W-z they behave as if I was using the US Layout (although I am using the German one). While this would be an issue easily circumvented by the mappings suggested by the config commentary, it behaves correctly (conform to the German layout I am using) if I do :SubtleReload. This means there is no working mapping if one wants to use W-y and W-z, as it only works at all times if the grab is identical in action. This behaviour is entirely reproduceable, and also it is not a necessity to have distinct actions mapped to both grabs, it remains a bug worth fixing.

- Status changed from Unconfirmed to Not a bug

That is not a bug in [subtle](#), any window manager uses the defaults of the Xorg session and it is reproducible in any other window manager. Please read [this FAQ entry](#) related to that problem.
