Description			
Hello,			
After «patching» the Rakefile as exposed in #315			
Run the compilation process of subtle. after installation, when I launch sublter, I got the following message :			
@			
\$>subtlter			
ERROR: Cannot find runtime files of sublter			
Please make sure that you installed subtle into the			
current ruby environment (2.2.0)			
@			
all the console output :

#3 - 01/06/2015 04:05 PM - Christoph Kappel

Can you open subtlr with an editor and post the shebang line from the file?

Do you use the same system ruby for your user or any virtualized one like rubybench/rvm/etc?

Also when your copy of the repo is from a previous install, run rake clobber first to wipe cached data when e.g. a library version has changed.

#4 - 01/06/2015 04:17 PM - François-Xavier LdM

```
@head /usr/bin/subtlr
```

```
#!/usr/bin/ruby # encoding: utf-8 # # @package subtle # # @file Subtle remote # @author Christoph Kappel <unexist@subforge.org> #  
@version $Id: sur.rb,v 7 2009/09/07 21:25:11 unexist $ # # This program can be distributed under the terms of the GNU GPL.@
```

(same result with subtle/data/bin/subtlr)

Do you use the same system ruby for your user or any virtualized one like rubybench/rvm/etc?

I don't write ruby programs,so i suppose I got the default setting.

Also when your copy of the repo is from a previous install, run '@rake clobber' first to wipe cached data when e.g. a library version has changed.

I tried to rerun rake after rake clubber, no effect, but I cloned a fresh version of sublte from mercurial, so it shouldn't be the problem.

#5 - 01/09/2015 02:23 PM - François-Xavier LdM

- Status changed from Confirmed to Closed

I feel so stupid,

It seems to be just a permission problem,
/usr/lib/ruby/site_ruby/2.2.0 and all file inside are not readable by non-root user.

I don't know if it is are ruby bug or a packaging error.

Thank you for your time.
