Target version:			
Description			
Hi Many preferences windows, passwordmanager askings and so on have the same CLASS as the main window. But the WM_NAME is often eg preferences. I want to have the preferences windows floating but not the main windows. I hope you understand.. Because of that, please add support for tagging with WM_NAME.			

History

#1 - 07/12/2009 10:05 PM - Christoph Kappel

- Target version set to 1
- Assignee set to Non member users
- Status changed from Unconfirmed to Rejected

Adding WM_NAME to tag matching will have bad side effects. WM_NAME is usually also the caption and if you use vimperator in firefox a tag that should only match **vim** will also match firefox. (There as an issue about exactly this.)
